Client Sentiment

The total performance over client groups does not have to reflect the total country performance. This is because the composition of client groups as a percentage of the total client population can change over time.

COMMENTS

In the Czech Republic the Best Investors come from Prague

In the four week period ending on May 22nd, DEGIRO clients from Prague performed better than investors from other major cities in the Czech Republic. In second place are DEGIRO clients from Olomouc followed by clients from Ostrava who are in third place.

Women Invest Better

According to data from DEGIRO, female clients perform better than men while investment in risky positions is similar. Given this better performance it is surprising that only 5.71% of DEGIRO's Czech client base are female. DEGIRO therefore invites more females to become clients.

Czech Investors Put their Money in International Markets

27% of trades executed by Czech clients are sent to international exchanges excluding the United States. DEGIRO is an ideal platform to spread investments across the world as it has connected many global markets.

US Markets

63% of transactions executed by Czech clients are carried out in US markets while 10% of trades are executed in the local markets. In terms of the amount of trading being carried out in the US, clients from the Czech Republic are leading in Europe. DEGIRO's commissions for trading on the US markets are up to 95% lower than prices for US trading by other Czech brokers.

Investors Performance

The best performing clients are those who come from Denmark, while clients from the Netherlands are in second position. Only a handful of clients use the possibility to short sell stocks, leading to a small short ratio of 0.30%. Interestingly 52.96% of transactions in stocks were 'buy' transactions. At first, this would seem that Czech investors were very positive about the market but keep in mind that DEGIRO is growing quite fast which means new clients are opening positions.

For the data in this report we used a dataset of 50,000 client accounts across 16 countries. Accounts in the dataset carried out more than 350,000 transactions during the four week period ending on the 22nd of May.
